

Scala Spark program

```
val input = sc.textFile("file:///Users/tilak/Desktop/sample.txt") // use your path
```

```
val words = input.flatMap(line => line.split(" "))
```

```
val wordPairs = words.map(word => (word, 1))
```

```
val wordCounts = wordPairs.reduceByKey(_ + _)
```

```
wordCounts.collect().foreach(println)
```

Sample.txt input file

hello spark

hello scala

spark is fun
